UI Wireframe (Desktop)

For Employee

For Admin roles

The diagram illustrates three distinct user interface flows for different roles:

- for HR Admin:** This flow starts with a screen labeled "HR Admin". It connects via a "Transfer control" link to a screen titled "HR Payroll dashboard". From there, it goes through a "Transfer request" link to an "Employee Management" screen, which displays "Employees status".
- for manager:** This flow begins with a screen labeled "Manager". It connects via a "Transfer request" link to a screen titled "Weekly reports", which shows a list of reports.
- for supervisor:** This flow starts with a screen labeled "Supervisor". It connects via a "Transfer request" link to a screen titled "Employee OT request". This screen then connects via a "File from external register reading time" link to another "Employee OT request" screen. Finally, it connects via a "Transfer request" link to a third "Employee OT request" screen.

The diagram illustrates the system architecture with three main components: HR Portal, Employee Management, and HR Portal Dashboard. The HR Portal and Employee Management components are connected to the HR Portal Dashboard via a 'main login page'.

Timeline

February 25 - March 2	The team will review and finalize the approved wireframe and Entity Relationship Diagram, confirm all system features for both User and Admin roles, and prepare the development environment.
March 3 - March 9	The team will implement and test the database structure, including tables for users, attendance, requests, reports, payroll, salary rate, and status records.
March 10 - March 16	The team will develop the authentication module with role verification and implement separate dashboards for employees and administrators.
March 17 - March 23	The team will implement employee functions, including time in, time out, automatic calculation of total working hours, and viewing of attendance records.
March 24 - March 31	The team will develop the request management module, enabling employees to submit leave requests, overtime requests, and work reports, which will be subject to administrative approval.
April 1 - April 6	The team will implement administrative functions, including attendance monitoring and approval or rejection of employee requests.
April 7 - April 13	The team will develop the payroll module, which calculates salaries based on total working hours, base rate, overtime, and deductions, and stores payroll records.
April 14 - April 20	The team will enhance the payroll module by adding payroll history, payroll export, payroll summaries, and salary adjustment features.
April 21 - April 27	The team will integrate all modules, conduct system debugging, and ensure that all processes follow the approved system flow.
April 28 - May 4	Comprehensive system testing will be conducted to validate functionality, performance, and security.
May 5 - May 10	The team will finalize and deploy the system, back up the database, complete and refine the research paper, finalize documentation, and prepare for the final presentation and submission.
